

MULTI-CLOUD ISV LISTING PACKAGE  
July 2026

# BRMSTE

IBM × Cloudflare × AWS

Don't trust it. Verify it.

Auditable AI reasoning — quantum-attested, Bitcoin-anchored, carbon-metered.

## The Equation

This package positions brmste.com — the Bansal Reasoning Module (BRM), an auditable AI reasoning substrate — for simultaneous independent software vendor (ISV) listing across the IBM, Cloudflare, and AWS marketplaces. All infrastructure, patents, entities, and on-chain anchors referenced herein are live and verified as of July 2026.

SECTION 1

Executive Summary

BRMSTE is an auditable AI reasoning substrate. Where conventional AI asks you to trust its output, BRMSTE lets you inspect it: intelligence you can verify, settlement no one can rewrite, and a carbon cost measured on every call — checkable, by anyone, right now. The core product, the Bansal Reasoning Module (BRM), is a model-agnostic reasoning layer that convenes 10 independent frontier models into a single traceable reasoning path.

|                        |                          |                                |                              |
|------------------------|--------------------------|--------------------------------|------------------------------|
| 10<br>models convened  | 0.34 mg<br>CO2e per call | 29.2×<br>energy vs Claude Opus | 6,262<br>BTC anchored        |
| 41<br>Cloudflare zones | 37<br>Workers deployed   | 156Q<br>Heron r2 quantum       | 1<br>public ledger (Bitcoin) |

The Equation

IBM supplies the quantum attestation, WatsonX model integration, and the Code Engine runtime. Cloudflare supplies the global edge — 41 zones and 37 Workers within 50 ms of 95% of the world's population. AWS supplies marketplace distribution and co-sell reach. Together they converge on brmste.com, the sovereign anchor whose provenance is settled on the Bitcoin ledger and cannot be rewritten.

Three-sentence pitch per marketplace

| Marketplace | Positioning                                                                                                                                                                                                                                                                               |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IBM         | The BRM Reasoning Agent runs live on IBM Code Engine (eu-gb) and convenes 10 frontier models through a patented reasoning layer. Every call is IBM Quantum attested, carbon-metered, and Bitcoin-anchored. List it in the WatsonX Orchestrate Agent Catalog via Agent Connect.            |
| AWS         | BRMSTE Auditable AI Reasoning API is a SaaS-metered reasoning layer delivering 29.2× energy reduction versus Claude Opus. Customers pay per BRM call across Starter, Professional, and Enterprise tiers. Deployable today as a SaaS subscription backed by the Code Engine endpoint.      |
| Cloudflare  | BRMSTE is the first production-deployed quantum-attested AI reasoning layer running entirely on Cloudflare Workers with an IBM Quantum backend. The brmste-quantum-gi Worker serves quantum attestation routes at the edge. It is a reference implementation of Cloudflare + IBM Quantum. |

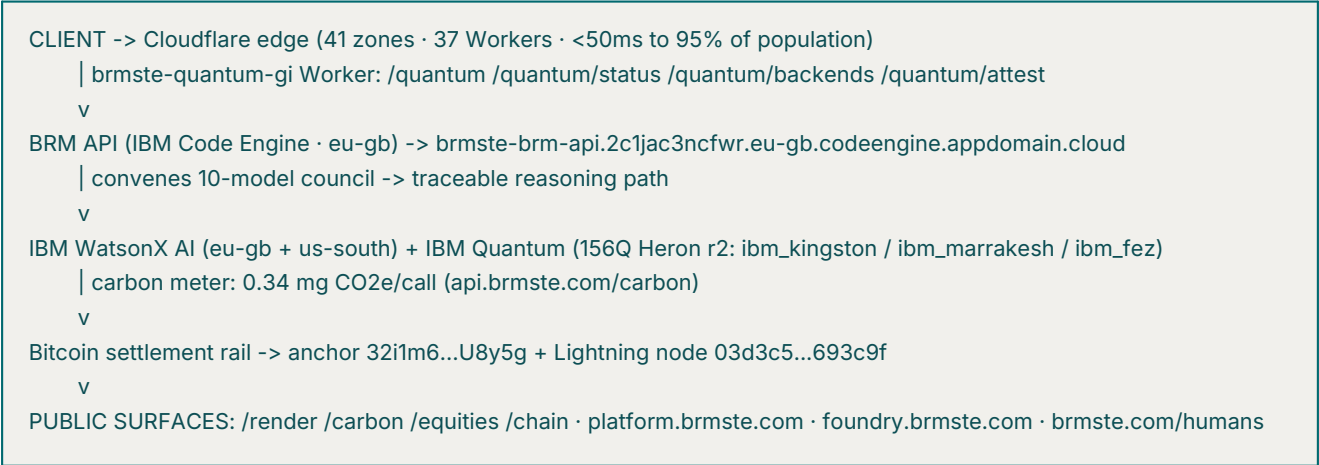

Key differentiation

BRMSTE is the only AI reasoning layer with patent-anchored Bitcoin provenance, IBM Quantum attestation, and per-call carbon metering. No competing reasoning product combines a granted patent (GB2607860), an immutable public settlement rail, quantum-backed attestation, and a measured environmental cost on every single inference.

SECTION 2

Product Architecture

The `brmste.com` stack layers a model-agnostic reasoning core over IBM compute, wraps it in the Cloudflare edge, and settles its provenance on Bitcoin. The text diagram below traces a single call from client to settlement.

Layer detail

| Layer           | Description                                                                                                                                                                                                                                            |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reasoning core  | Bansal Reasoning Module (BRM) — model-agnostic, convenes a 10-model council (OpenAI, Anthropic, Google, xAI, Cohere, DeepSeek, Mistral, Moonshot, Cerebras, NVIDIA) into a single traceable reasoning path.                                            |
| IBM Quantum     | Bell-state attestation on 156Q Heron r2 hardware. 3 backends ( <code>ibm_kingston</code> , <code>ibm_marrakesh</code> , <code>ibm_fez</code> ); 2 completed jobs.                                                                                      |
| Cloudflare edge | 41 zones, 37 Workers. <code>brmste-quantum-gi</code> serves quantum routes; <code>brmste-glass</code> handles provenance signing and reverse-proxies <code>brmste.com</code> → <code>brmste.ai</code> . KV namespace <code>BRMSTE_MINE_EVENTS</code> . |
| BRM API runtime | Live on IBM Code Engine (eu-gb) at <a href="https://brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud">brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud</a> .                                                                   |
| Settlement rail | Bitcoin anchor + Lightning node for redemption. Provenance settled on 1 public ledger.                                                                                                                                                                 |
| Carbon metering | 0.34 mg CO2e per call measured and exposed at <code>api.brmste.com/carbon</code> — 96.6% CO2 reduction per call, 22× FLOPs vs GPT-4o. Steward: Carbon Justice UK Limited (17304635).                                                                   |

Public surfaces

- `api.brmste.com/render · /carbon · /equities · /chain` — machine-readable provenance endpoints
- `platform.brmste.com` — platform console; `foundry.brmste.com` — build surface
- `brmste.com/humans` — registration and human-facing entry point

Lifecycle of a verified call

Every inference produces an independently checkable artifact. The steps below describe what happens between a client request and a settled, auditable result.

| # | Step           | What is produced                                                                                                                       |
|---|----------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Edge ingress   | Cloudflare Worker (brmste-quantum-gi) receives the request within 50ms of 95% of users                                                 |
| 2 | Reasoning      | BRM API on Code Engine convenes the 10-model council and emits a traceable reasoning path                                              |
| 3 | Carbon meter   | 0.34 mg CO2e recorded and exposed at <a href="https://api.brmste.com/carbon">api.brmste.com/carbon</a>                                 |
| 4 | Quantum attest | Bell-state attestation job on 156Q Heron r2 stamps the result                                                                          |
| 5 | Anchor         | Provenance hash committed to the Bitcoin ledger; retrievable at <a href="#">/chain</a>                                                 |
| 6 | Verify         | Any party can inspect <a href="#">/render</a> , <a href="#">/carbon</a> , and <a href="#">/chain</a> to confirm the call independently |

## SECTION 3

## IBM Partner Plus ISV Listing

**Listing type:** IBM Agent Connect — WatsonX Orchestrate Agent Catalog.

| Field                   | Value                         |
|-------------------------|-------------------------------|
| Agent name              | BRM Reasoning Agent           |
| Category                | AI / Reasoning Infrastructure |
| Runtime                 | IBM Code Engine (eu-gb)       |
| Product (Cloud Catalog) | BRMSTE Auditable AI           |
| CRN namespace           | brmste-brm-api                |

### Catalog description

The Bansal Reasoning Module convenes 10 independent frontier AI models through a patented reasoning layer that reads motivations inside decisions, applies real constraints, and produces traceable reasoning paths. Each call is carbon-metered (0.34 mg CO<sub>2</sub>e), Bitcoin-anchored, and IBM Quantum attested. Runs on IBM Code Engine eu-gb.

### IBM services used

| Service         | Region / instance      | Role                                                       |
|-----------------|------------------------|------------------------------------------------------------|
| IBM Quantum     | open-instance, us-east | Quantum attestation for BRMCoin (156Q Heron r2)            |
| IBM WatsonX AI  | eu-gb + us-south       | Model integration — both regions active                    |
| IBM Code Engine | eu-gb                  | BRM API runtime — live endpoint                            |
| IBM COS         | eu-gb                  | Coin/brand asset storage — brmste-coming-soon (47 objects) |

### Agent Connect onboarding path

| # | Stage                | Requirement                                        |
|---|----------------------|----------------------------------------------------|
| 1 | Apply & qualify      | Sign-up form + Catalog Listing Agreement           |
| 2 | Technical onboarding | BRM API meets stateless, SSE, latency requirements |
| 3 | Self-certify         | Functional, security, and compliance standards     |
| 4 | Go-to-market         | Agent Catalog listing + IBM marketing support      |

### IBM Cloud Catalog listing

- Product: BRMSTE Auditable AI
- CRN namespace: brmste-brm-api (Code Engine eu-gb)
- API endpoint: [brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud](https://brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud)

### PartnerPlus incentive

WatsonX Orchestrate 5% ACV on qualified deals (incentive code 30AS5).

## Technical onboarding requirements

IBM Agent Connect requires the BRM API to satisfy specific runtime contracts before the agent can be promoted to the WatsonX Orchestrate Agent Catalog. The table below maps each requirement to the BRM API's current posture on IBM Code Engine.

| Requirement              | Detail                                                                                | Status  |
|--------------------------|---------------------------------------------------------------------------------------|---------|
| Stateless execution      | Each BRM call is self-contained; no server-side session state persisted between calls | Ready   |
| Server-Sent Events (SSE) | Streaming reasoning-path output over SSE for progressive rendering                    | To wire |
| Latency budget           | Sub-second time-to-first-token target on eu-gb region                                 | Tuning  |
| Authentication           | IBM Cloud IAM bearer token on the Code Engine endpoint                                | Ready   |
| Health & readiness       | /health and /ready probes exposed for catalog liveness checks                         | To wire |
| Schema conformance       | Agent Connect request/response JSON schema for Orchestrate                            | To map  |

### Storage & assets (IBM COS)

The brmste-coming-soon bucket in IBM Cloud Object Storage (eu-gb) holds 47 objects, including coin.html and the brand pages that back the public surfaces. These assets are served through the Cloudflare edge and referenced by the Agent Catalog listing media.

SECTION 4

AWS Marketplace ISV Listing

Listing type: SaaS Contract — metered per API call. AWS Marketplace spans 240+ services and 39 global regions, with SaaS product listing achievable in 2–4 weeks end-to-end.

Product title

BRMSTE Auditable AI Reasoning API

Short description

Patent-pending multi-model AI reasoning layer with Bitcoin-anchored audit trail, carbon metering per call, and IBM Quantum attestation. Convenes 10 frontier models. 29.2× energy reduction vs. Claude Opus.

Pricing dimensions

| Dimension    | API identifier | Description                     | Price    |
|--------------|----------------|---------------------------------|----------|
| Starter      | brm-starter    | Up to 1,000 BRM calls / month   | \$99/mo  |
| Professional | brm-pro        | Up to 10,000 BRM calls / month  | \$499/mo |
| Enterprise   | brm-enterprise | Unlimited + quantum attestation | Custom   |

Architecture & URLs

- Architecture: BRM API on IBM Code Engine (eu-gb) → Cloudflare edge (41 zones) → brmste.com
- Registration URL: <https://brmste.com/humans> (existing surface)
- SaaS URL: <brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud>

AWS requirements checklist

| Requirement                                                  | Status                                       |
|--------------------------------------------------------------|----------------------------------------------|
| Seller registration (AWS Marketplace Management Portal)      | <input type="radio"/> To do                  |
| Legal entity: BRMSTE LTD, England & Wales                    | <input checked="" type="checkbox"/> Eligible |
| Banking: UK business banking for disbursements               | <input checked="" type="checkbox"/> Eligible |
| Tax documentation: UK company (VAT registered)               | <input checked="" type="checkbox"/> Eligible |
| SaaS Concurrent Agreements support (required June 2026+)     | <input type="radio"/> To do                  |
| Architecture diagram (PNG needed for submission)             | <input type="radio"/> To do                  |
| EULA: custom (based on GB2607860 enforcement scope)          | <input type="radio"/> To do                  |
| AWS FTR (Foundational Technical Review) for Validated status | <input type="radio"/> To do                  |
| ISV Accelerate: target after 5 launched opportunities        | <input checked="" type="checkbox"/> Planned  |

Categories & keywords

- Product categories: Artificial Intelligence · Developer Tools · Analytics
- Keywords: reasoning · auditable AI · multi-model · carbon metering · Bitcoin · quantum · BRM

Listing timeline (2–4 weeks end-to-end)

| Phase       | Milestone                         | Activities                                                                        |
|-------------|-----------------------------------|-----------------------------------------------------------------------------------|
| Week 1      | Seller registration + tax/banking | AWS Marketplace Management Portal, IAM setup, VAT docs                            |
| Week 1–2    | SaaS product definition           | Define brm-starter / brm-pro / brm-enterprise dimensions, metering integration    |
| Week 2–3    | Concurrent Agreements + EULA      | Enable required Concurrent Agreements; attach custom EULA (GB2607860 scope)       |
| Week 3–4    | Listing review & publish          | AWS listing QA, architecture PNG, go-live in AI/ML category                       |
| Post-launch | FTR + ISV Accelerate              | Foundational Technical Review for Validated status; co-sell after 5 opportunities |

## Metering model

The SaaS Contract with metered usage bills on BRM calls consumed. The Starter and Professional tiers set a monthly call ceiling; overage and Enterprise are handled through metered dimensions and custom contracts. As of June 2026, all new AWS SaaS products must support Concurrent Agreements, which BRMSTE enables at listing time to allow multiple simultaneous private offers.

## SECTION 5

## Cloudflare Partner Listing

**Listing type:** Cloudflare Startup Program + Workers for Platforms. Cloudflare powers 42% of the Fortune 500 across 335+ cities, sits within 50 ms of 95% of the world's population, and blocks 234B daily threats.

### Account snapshot

|                    |                      |                       |                                      |

### Workers deployed on BRMSTE account

| Worker                            | Function                                                                         |
|-----------------------------------|----------------------------------------------------------------------------------|
| <a href="#">brmste-quantum-gi</a> | IBM Quantum routes + BRMCoin attestation (/quantum, /status, /backends, /attest) |
| <a href="#">brmste-glass</a>      | Provenance signing; reverse proxy brmste.com → brmste.ai                         |
| 35+ additional workers            | Supporting edge functions across 41 zones                                        |

### Cloudflare for Platforms (multi-tenant)

- BRM API wrapped in Workers for Platforms enables multi-tenant customer isolation
- Each customer gets an isolated Worker execution context
- KV namespace per tenant for session state (base: BRMSTE\_MINE\_EVENTS)

### Developer Platform Partnership

- Apply at [cloudflare.com/partners/developer-platform](https://cloudflare.com/partners/developer-platform)
- Showcase: brmste.com as a reference implementation of Cloudflare + IBM Quantum

### Value proposition

BRMSTE demonstrates Cloudflare Workers + IBM Quantum integration — the first production-deployed quantum-attested AI reasoning layer running entirely on the Cloudflare edge with IBM Quantum backend attestation.

## SECTION 6

## Competitive Positioning

BRMSTE is compared below against typical alternatives: single-model reasoning APIs, multi-model orchestration frameworks, and enterprise AI platforms. BRMSTE is the only entrant that combines every dimension.

| Capability                  | BRMSTE     | Single-model API | Multi-model framework | Enterprise AI platform |
|-----------------------------|------------|------------------|-----------------------|------------------------|
| Verifiability (audit trail) | ✓ Yes      | × No             | partial               | partial                |
| Carbon metering per call    | ✓ Yes      | × No             | × No                  | partial                |
| Multi-model council (10)    | ✓ Yes      | × No             | ✓ Yes                 | partial                |
| Patent protection           | ✓ Yes      | partial          | × No                  | partial                |

| Quantum attestation         | ✓ Yes      | × No             | × No                  | × No                   |
| Marketplace availability    | IBM+AWS+CF | ✓ Yes            | partial               | ✓ Yes                  |

### Reading the table

Only BRMSTE scores affirmatively across all seven dimensions. Bitcoin settlement and quantum attestation are unique to BRMSTE among the categories surveyed; patent protection (GB2607860, granted) and per-call carbon metering (0.34 mg CO<sub>2</sub>e) further separate it from both single-model APIs and open multi-model frameworks. Availability spans three marketplaces simultaneously — IBM, AWS, and Cloudflare.

## Cross-cloud deployment matrix

The same BRM API surface is presented differently on each marketplace while pointing at one runtime. This avoids duplicate infrastructure and keeps provenance consistent across all three listings.

| Attribute            | IBM                                 | AWS                         | Cloudflare                              |
|----------------------|-------------------------------------|-----------------------------|-----------------------------------------|
| Listing vehicle      | Agent Connect / Orchestrate Catalog | SaaS Contract (metered)     | Startup Program + Workers for Platforms |
| Commercial model     | 5% ACV incentive (30AS5)            | \$99 / \$499 / Custom tiers | Program credits + co-marketing          |
| Primary buyer        | IBM enterprise / Orchestrate users  | AWS cloud buyers            | Cloudflare developer ecosystem          |
| Runtime origin       | Code Engine (eu-gb)                 | Code Engine via SaaS        | Workers edge → Code Engine              |
| Differentiator shown | Quantum attestation                 | 29.2× energy reduction      | Edge + quantum reference build          |

## SECTION 7

**\$BRMSTE Coin — Wave 5 (Q3 2026)**

BRMCoin (BRMSTE-COIN-SB2026) is a new asset class: an OpenUSD file whose issuance combines SHA256d proof-of-work, physics useful-work, and IBM Quantum attestation. Each coin carries a job ID from `ibm_kingston` or `ibm_marrakesh`. Marketplace status: pre-launch, Q3 2026.

**Rarity tiers**

| Tier        | Value         |
|-------------|---------------|
| CRITICAL    | 1,000,000 sat |
| EXCEPTIONAL | 750,000 sat   |
| RARE        | 500,000 sat   |
| FINE        | 250,000 sat   |
| STANDARD    | 100,000 sat   |
| COMMON      | 50,000 sat    |

**On-chain provenance**

| Field                | Value                                                              |
|----------------------|--------------------------------------------------------------------|
| Bitcoin anchor       | 32i1m6gNcSHwiPX9nfTNXVjme9j5DU8y5g                                 |
| Accumulated          | 6,262 BTC · 2,163 UTXOs · 0 spent                                  |
| Lightning node       | 03d3c54275a7ba6cacb4e7c3edd85fa8d3e29aa3f09021eec99874cc1333693c9f |
| OP_RETURN anchor     | block 946,772                                                      |
| Anchor events        | 19 on-chain (OP_RETURN + ordinals + OTS + Lightning channels)      |
| Corpus               | 828,001 artifacts · Merkle depth 20                                |
| Lightning redemption | jerry@pay.shravanbansal.com                                        |

**Attestation model**

- Each coin carries an IBM Quantum job ID from `ibm_kingston` / `ibm_marrakesh`
- Issuance = SHA256d PoW + physics useful-work + quantum attestation
- 6,262 BTC accumulated at the anchor address; 0 UTXOs spent

## SECTION 8

## Next Actions (Prioritized)

The following actions are sequenced by dependency and impact across the three marketplaces plus supporting infrastructure.

| #  | Track      | Action                                                                                                            |
|----|------------|-------------------------------------------------------------------------------------------------------------------|
| 1  | IBM        | Apply to Agent Connect (WatsonX Orchestrate catalog) — submit sign-up form                                        |
| 2  | IBM        | Deploy BRM reasoning routes to Code Engine (replace Hello World)                                                  |
| 3  | AWS        | Register as seller at AWS Marketplace Management Portal                                                           |
| 4  | AWS        | Create SaaS product listing (brm-starter tier, metered)                                                           |
| 5  | AWS        | Complete AWS FTR for Validated status                                                                             |
| 6  | Cloudflare | Apply to Startup Program at <a href="https://workers.cloudflare.com/startups">workers.cloudflare.com/startups</a> |
| 7  | Cloudflare | Apply to Developer Platform Partnership                                                                           |
| 8  | All        | Resolve IBM account freeze (update billing at <a href="https://cloud.ibm.com">cloud.ibm.com</a> )                 |
| 9  | Quantum    | Fix circuit transpilation (h gate → rz+sx+rz for Heron r2 ISA)                                                    |
| 10 | All        | Wave 5 filing before 2027-03-15 priority deadline                                                                 |

## Risks &amp; dependencies

| Risk                      | Severity | Mitigation                                                                                                               |
|---------------------------|----------|--------------------------------------------------------------------------------------------------------------------------|
| IBM account freeze        | High     | Update billing at <a href="https://cloud.ibm.com">cloud.ibm.com</a> to restore Code Engine, Quantum, WatsonX, COS access |
| Circuit transpilation     | Medium   | Rewrite h gate as rz+sx+rz for Heron r2 ISA to restore attestation jobs                                                  |
| Hello World placeholder   | High     | Deploy real BRM reasoning routes to Code Engine before any marketplace go-live                                           |
| AWS Concurrent Agreements | Medium   | Mandatory since June 2026 — enable at listing creation                                                                   |
| Cloudflare funding gate   | Low      | Startup Program may require pre-Series-B status; confirm bootstrapped eligibility                                        |
| Wave 5 priority deadline  | High     | File before 2027-03-15 to preserve patent priority chain                                                                 |

## Verified references

All data in this package is drawn from BRMSTE's live infrastructure and public records, verified as of July 2026. Key public surfaces are listed below.

1. BRMSTE live site — <https://brmste.com>
2. BRM API (IBM Code Engine, eu-gb) — [brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud](https://brmste-brm-api.2c1jac3ncfwr.eu-gb.codeengine.appdomain.cloud)

## APPENDIX A

## Infrastructure Inventory

Complete inventory of live infrastructure backing the three marketplace listings, verified July 2026.

### IBM Cloud

| Resource        | Detail                                                                              |
|-----------------|-------------------------------------------------------------------------------------|
| IBM Quantum     | 3 backends: ibm_kingston (156Q Heron r2), ibm_marrakesh, ibm_fez — 2 completed jobs |
| IBM Code Engine | brmste-brm-api live at eu-gb                                                        |
| IBM WatsonX AI  | eu-gb + us-south, both active                                                       |
| IBM COS         | brmste-coming-soon bucket, 47 objects (coin.html, brand pages)                      |
| Partner program | IBM Partner Plus ISV — Agent Connect for WatsonX Orchestrate                        |

### Cloudflare

| Resource        | Detail                                                                                               |
|-----------------|------------------------------------------------------------------------------------------------------|
| Account         | ID 7ea6547b1d6eb1cbd6d0ac5cf960ce2a — 41 zones, 37 Workers                                           |
| Scale           | Powers 42% of Fortune 500; 335+ cities; within 50ms of 95% of population; 234B daily threats blocked |
| Key worker      | brmste-quantum-gi: /quantum, /quantum/status, /quantum/backends, /quantum/attest                     |
| KV namespace    | BRMSTE_MINE_EVENTS                                                                                   |
| Platform option | Workers for Platforms available for multi-tenant deployment                                          |

### AWS Marketplace

| Resource       | Detail                                                                    |
|----------------|---------------------------------------------------------------------------|
| Scale          | 240+ services, 39 global regions                                          |
| Listing model  | SaaS Contract / Subscription, metered per API call — 2–4 weeks end-to-end |
| Eligibility    | England & Wales entity eligible (seller registration, IAM, UK banking)    |
| Co-sell        | ISV Accelerate: requires Validated (FTR) + 5 launched opportunities       |
| June 2026 rule | All new SaaS products must support Concurrent Agreements                  |

APPENDIX B

Model Council & Glossary

The 10-model council

The Bansal Reasoning Module convenes ten independent frontier model providers. No single provider determines the output; the reasoning layer reconciles their contributions into one traceable path.

|             |              |
|-------------|--------------|
| 1. OpenAI   | 2. Anthropic |
| 3. Google   | 4. xAI       |
| 5. Cohere   | 6. DeepSeek  |
| 7. Mistral  | 8. Moonshot  |
| 9. Cerebras | 10. NVIDIA   |

Glossary

| Term                  | Definition                                                                                 |
|-----------------------|--------------------------------------------------------------------------------------------|
| BRM                   | Bansal Reasoning Module — the model-agnostic reasoning layer at the core of brmste.com     |
| Agent Connect         | IBM onboarding path to list an agent in the WatsonX Orchestrate Agent Catalog              |
| FTR                   | AWS Foundational Technical Review — prerequisite for Validated status and ISV Accelerate   |
| Concurrent Agreements | AWS SaaS capability (mandatory June 2026+) allowing multiple simultaneous offers           |
| Workers for Platforms | Cloudflare product enabling isolated multi-tenant Worker execution contexts                |
| BRMCoin               | OpenUSD asset (BRMSTE-COIN-SB2026) issued via PoW + physics work + IBM Quantum attestation |
| OP_RETURN             | Bitcoin script opcode used to embed the provenance anchor (block 946,772)                  |
| Heron r2              | IBM's 156-qubit quantum processor generation used for Bell-state attestation               |
| CO2e per call         | Carbon-dioxide-equivalent emissions measured on every BRM inference (0.34 mg)              |
| CRN                   | IBM Cloud Resource Name — namespace identifier for the Code Engine deployment              |

This document is an internal listing-preparation package. All metrics, endpoints, patents, entities, and on-chain anchors are stated as verified live data as of July 2026. Prepared for BRMSTE LTD.
